                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes novel humanized anti-tumor associated stalylated glycoprotein antibodies (TAG-72) which have cytostatic activity. The antibodies have binding specificity for the cancer antigen TAG-72. They can be used for the in vivo detection of carcinoma lesions. They can also be used for in vitro diagnostics. They can also be modified with therapeutic agents e.g. a radiouclide, drug, biological response modifier, toxin or another antibody for the treatment of cancers. The humanized anti-TAG-72 antibodies can reduce harmful anti-mouse antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                359 GACATCGTGATGACCCAGTCTCCAGACTCCCTGGCTGTCTCTGGGCGAGAGGGCCACC 418
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ATCAACTGCAAGTCCAGCCAGAGTGTTTTATACAGCTCCAACAACAAGAATTACTTAACT 120

             Plasmid pSCFV UHH expresses a biologically active, TAG-72 binding SCFV consisting of the Hum4 VL and CC49 VH. The expression plasmid utilises the beta-lactamase penP promoter, pectate lyase pelB signal sequence and the penP terminator region. Different Ig light chain variable regions can be inserted in the Ncol-HindIII sites, and different SCFV linkers can be inserted in the HindIII-XhoI sites and different Ig heavy chain variable regions can be inserted in the XhoI-Nhe I sites.
                                                                                                                                                                                                                                                                                             Single chain antibody; SCFV1; human subgroup 4 germline antibody; variable heavy; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to producing humanized anti-tumor associated sialylated glycoprotein (TAG-72) antibodies (anti-TAG). The antibodies have binding specificity for the cancer antigen TAG-72. These antibodies have variable regions with VL segments derived from human subgroup IV germline gene and a VH segment (encoded by the VHalphaTAG germline gene) which is capaphate of combining with the VL to form a three dimensional structure having the ability to bind TAG-72. They can be used for the in vivo detection of carcinoma lesions. They can also be used for in vitro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Production of humanized anti-TAG-72 antibodies, used for the detection, in vivo imaging and treatment of cancers

This invention describes novel humanized anti-tumor associated sialylated glycoprotein antibodies (TAG-72) which have cytostatic activity. The antibodies have binding specificity for the cancer antigen TAG-72. They can be used for the in vivo detection of carcinoma leaions. They can also be used for in vitro diagnostics. They can also be modified with therapeutic agents e.g. a radionuclide, drug, biological response modifier, toxin or another antibody for the treatment of cancers. The humanized anti-TAG-72 antibodies can reduce harmful anti-mouse antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

The plasmid pATGFLAG was generated from pSCFVUHH (see AAQ45605) to incorporate a flag-coating sequence 3' to any human VH gene to be expressed contiguously with Hund VL. The plasmid pATGFLAG, when digested with XhoI and Nhe I and purified becomes the human chi discovery plasmid contg. Hund VL in this SCFV format. pSC49FLAG contains murine antibody CC49VH inserted into sites of XhoI - Apripase of pATPFLAG. It was evaluated for biological activity with the purpose of serving as a positive control for the FLAG assay
                                                                                                 New composite antibody binding to tumour associated TAG-72 antigen - includes light chain variable region from human subgroup 4 germline gene, useful, opt. as conjugate, for diagnosis or treatment of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1359 BP; 374 A; 308 C; 325 G; 352 T; 0 other;

Sequence 453, Application US/09925299;
Patent No. US20020055627A1;
GENERAL INFORMATION:
APPLICANT: ROSEN et al.
TITLE OF INVENTION: Nucleic Acids, Proteins and Antibodies
FILE REFERENCE: PA102
CURRENT APPLICATION NUMBER: US/09/925,299
CURRENT FILING DATE: 2001-08-10
PRIOR APPLICATION NUMBER: PCT/US00/05883
PRIOR RELING DATE: 1999-03-12
NUMBER OF SEQ ID NOS: 1556;
SOFTWARE: PATENTI Ver. 2.0
SEQ ID NO 453
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       LOCATION: (453)

Patent No. 5990297

GENERAL INFORMATION:
APPLICANT: Saiko HOSOKAWA et al.
TITLE OF INVENTION: HUMAN MONOCLONAL ANTIBODY SPECIFICALLY
TITLE OF INVENTION: BINDING TO SURFACE ANTIGEN OF CANCER CELL MEMBRANE
NUMBER OF SEQUENCES: 42

CORRESPONDENCE ADDRESS:
ADDRESSEE: Menderoth, Lind & Ponack, L.L.P.
                                                                                                                                                                                                                                                                                                         1 GACATCGTGATGACCCAGTCTCCAGACTCCCTGGCTGTGTCTCTGGGCGAGAGGGCCACC

Sequence 19, Application US/08463903

Patent No. 6071515

GENERAL INFORMATION:

APPLICANT: Meses, Peter S.

APPLICANT: Richard, Ruth A.

APPLICANT: Richard, Ruth A.

APPLICANT: Richard, Ruth A.

APPLICANT: Affolicer, Joseph A.

APPLICANT: Affolicer, Joseph A.

TITLE OF INVENTION: Dimer and Multimer Forms of Single Chain Polypeptides

FILE REFERENCE: 40224A US

CURRENT FILING DATE: 1995-6-6-05

CURRENT FILING DATE: 1995-6-05

EARLIER FILING DATE: 1992-08-21

NUMBER OF SEO ID NOS: 102

SOFTWARE MS-WOR' FOR Windows, Ver. 7.0

LENGTH: 1027
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        599 ATCAGCAGCCTGCAGGCTGAAGATGCGGCAGTTTATTACTGTCAGCAATATTATAGTTAT 658

Sequence 21, Application US/07935695

Patent No. 632507

GENERAL INFORMATION:

APPLICANT: Mazes, Peter S.

APPLICANT: Richard, Ruth A.

APPLICANT: Richard, Ruth A.

APPLICANT: Richard, Ruth A.

APPLICANT: Affolice, Nicolas J.

TILE OF INVENTION: Dimer and Multimer Forms of Single Chain Polypeptides

FILE REFERENCE: 40224A US

CURRENT PILING DATE: 1992-08-21

PRIOR APPLICATION NUMBER: US/07/935,695

CURRENT FILING DATE: 1995-06-05

NUMBER OF SEQ ID NOS: 102

SOFTWARE: MS-Word for Windows, Ver. 7.0
